Mikal Ustad

Introduction

USGS:

- Quality Science and Integrity

Sponsors:

- Trent Hare and Moses Milazzo
 - USGS Astrogeology Research Program
 - 95% work for NASA

Business operations:

- ISIS is used to process images collected from planetary missions
- Create mosaics from a few to thousands of images

An Example: Noise Distortion

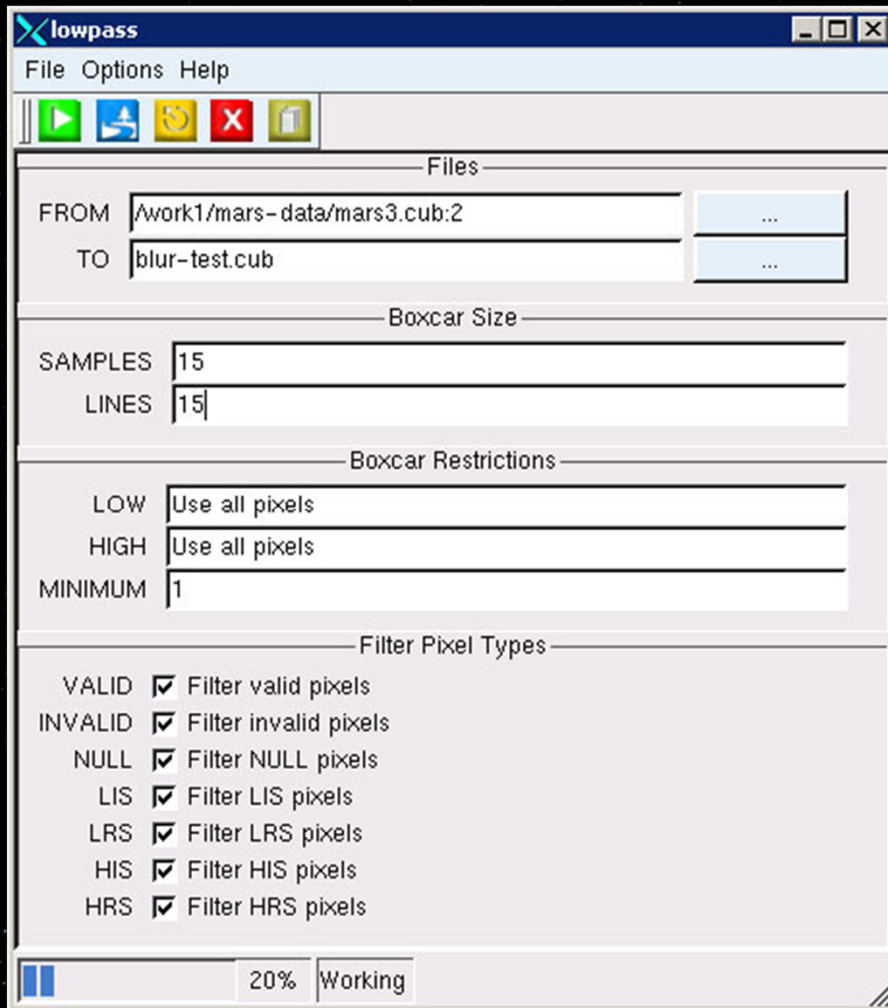

Noise Filter Applied

Lower Temperature Filter

The image features a dark blue, star-filled sky as a background. The stars vary in size and brightness, with some appearing as distinct points of light and others as a dense field of smaller dots. At the bottom of the image, there is a glowing, wavy horizon line that resembles a celestial body's surface or a nebula's edge, rendered in a vibrant, translucent blue color. The overall aesthetic is that of a deep space or astronomical observation.

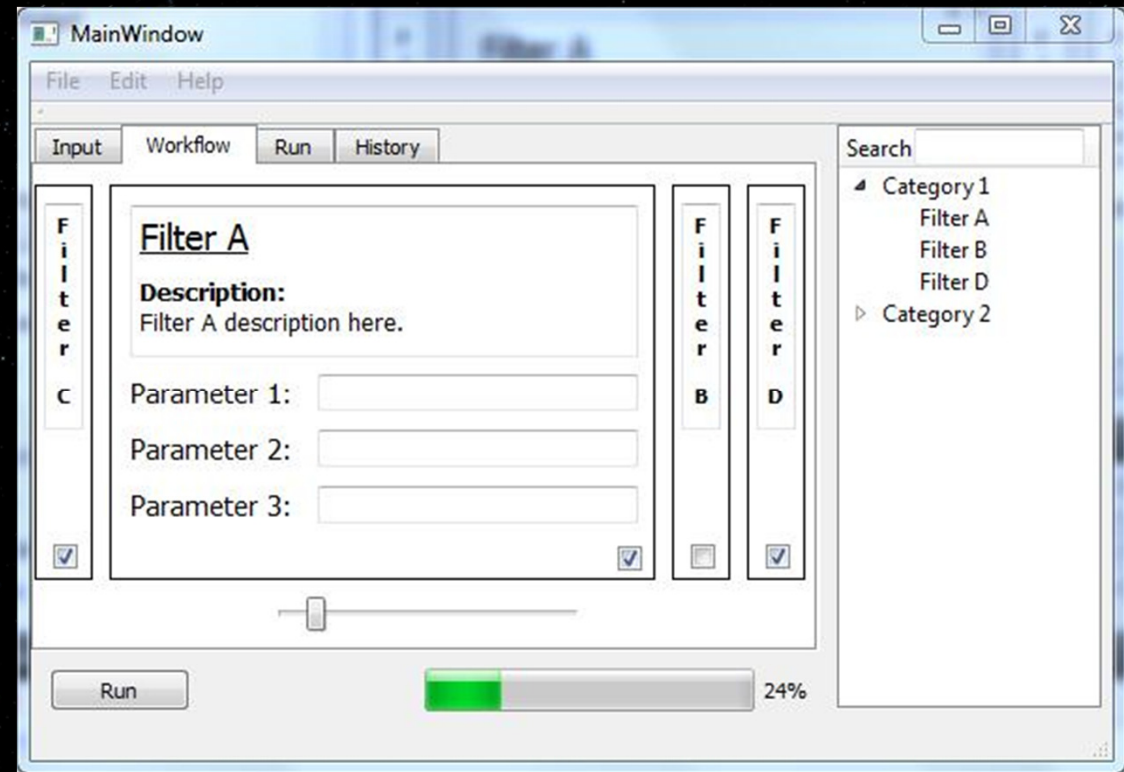

Current Situation

- Integrated Software for Imagers & Spectrometers
- 300 separate programs
 - rudimentary GUI
 - command line system calls
- Training takes 3-5 months

Solution

- Centralized GUI
 - encompasses all the programs and features that ISIS provides
- Help Center
 - located within the GUI
 - provides detailed descriptions and examples

Functional Requirements

- Everything is at a user's fingertips
 - Process flow frames
 - Shortcut buttons
 - Search box
 - Macros

Nonfunctional Requirements

- Process
 - Waterfall like
- Environment
 - Hardware
 - Software
 - UNIX Systems
- Technologies
 - QT GUI Framework
 - C++
 - UNIX system calls
 - XML

Nonfunctional Requirements Continued

- Maintainability and Expandability
- Understandability
 - Learnability
 - Ease of Use
- Performance
- Reliability
- Robustness

Present Challenges

- Finding even development workloads for each group member
- Learning QT
- Coming up with new innovative design ideas
- Organizing real user testing

Project Timeline

Currently:

- Developing creative designs
- Prototype
 - Core GUI functionality.
- Virtual Machine

March:

- Implementation month
- Following spring break
 - Initialize the testing process.

April:

- Design Presentation 4/5/2012
 - Strenuous user testing
 - Implementation Complete
- Capstone Conference Final Project Presentation

Summary

What we are creating:

- A centralized GUI
 - With a Help Center

What we have:

- Knowledge
- Creativity
