Tech Companies Use of the Agile Methodology

- Agile software development is a programming practice centered around small teams.
- According to Goremotely, over 71% of tech companies either already use, or are adopting agile methods.
- This number is rapidly increasing as agile continues to dominate the waterfall method.

The Difficulty in Managing and Maintaining Teams

- Team based classes are difficult to organize due to how many moving parts they entail
- Keeping up with submissions and ongoing processes can be tedious
- Menial tasks take up a lot of time
- Communication between different parties is difficult to track

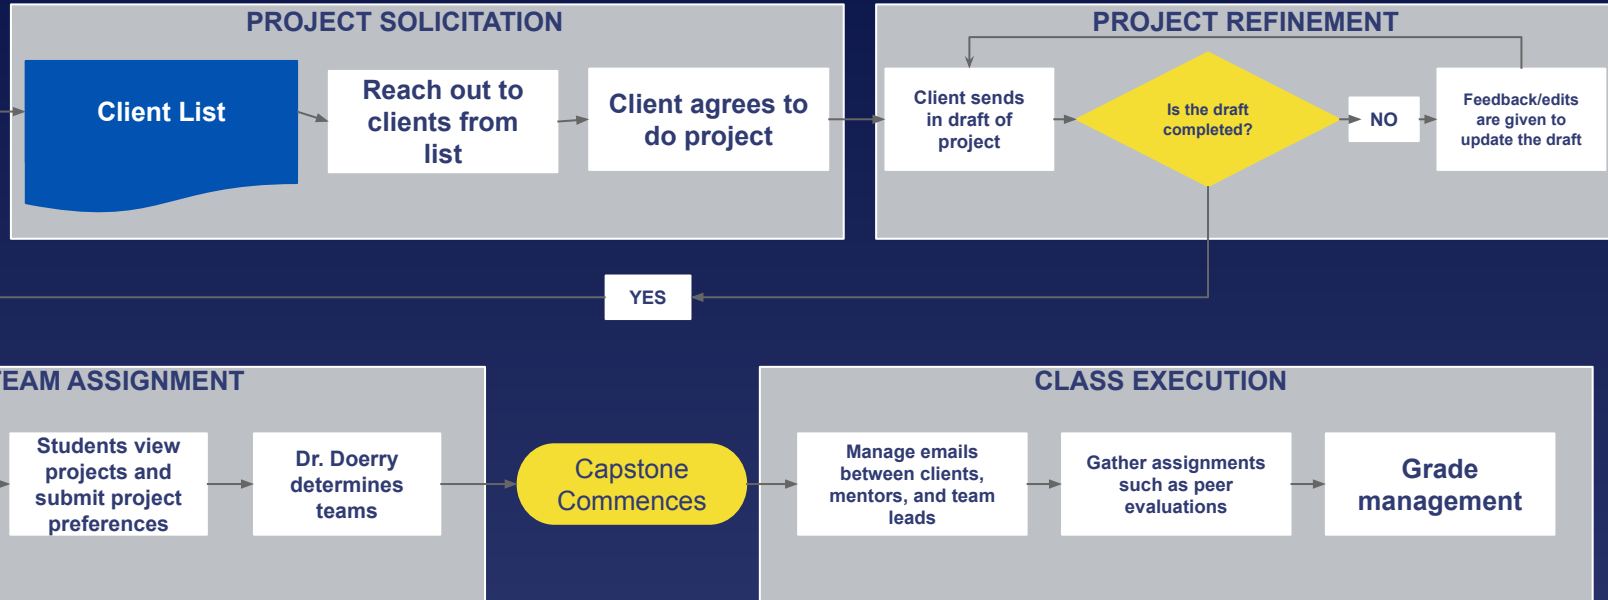

Our Client

- Computer Science Professor at Northern Arizona University
- Has lead CS capstone project for 15+ years
- Is one of many faculty members that understands the moving parts in organizing a team-based course

Dr. Eck Doerry

Dr. Doerry's Current Workflow

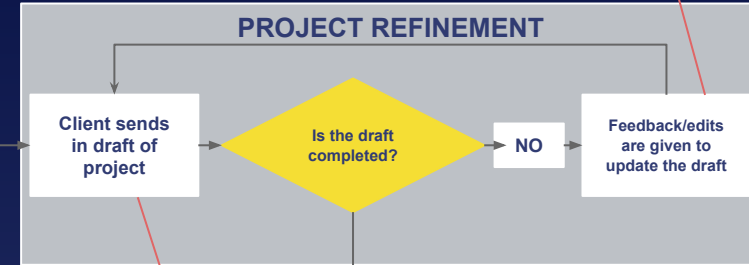

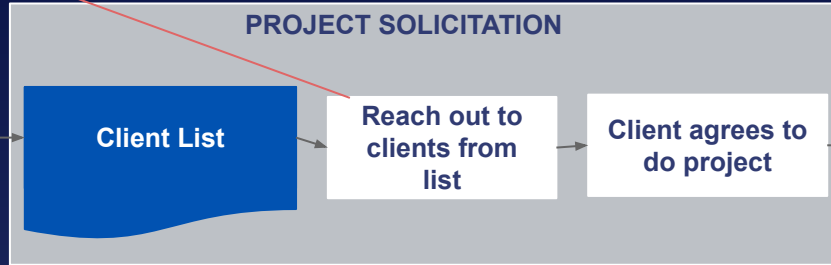

Problems with the Workflow

Chance to forget to reply

Manually creates email list

~1 Hour of Effort

~8 Hours of Effort Per Team

Information must be digitized for algorithm

Manually n-queens spreadsheet

Digs through inbox to find emails

Manually check/update versions in spreadsheet

TEAM ASSIGNMENT

CLASS EXECUTION

Capstone Commences

~16 Hours of Effort

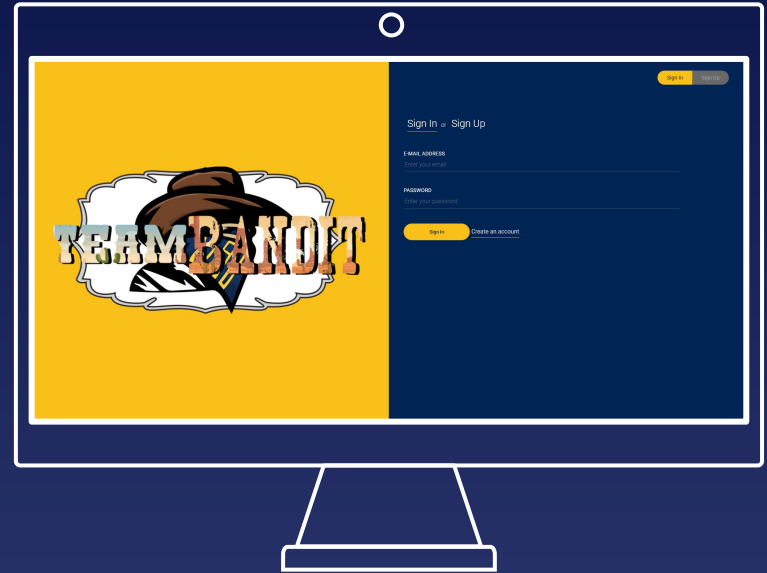

~8 Hours of Effort Per Team

Based on 2021-2022 Capstone, Total Hours of Effort: 401 Hours of Effort Per Capstone

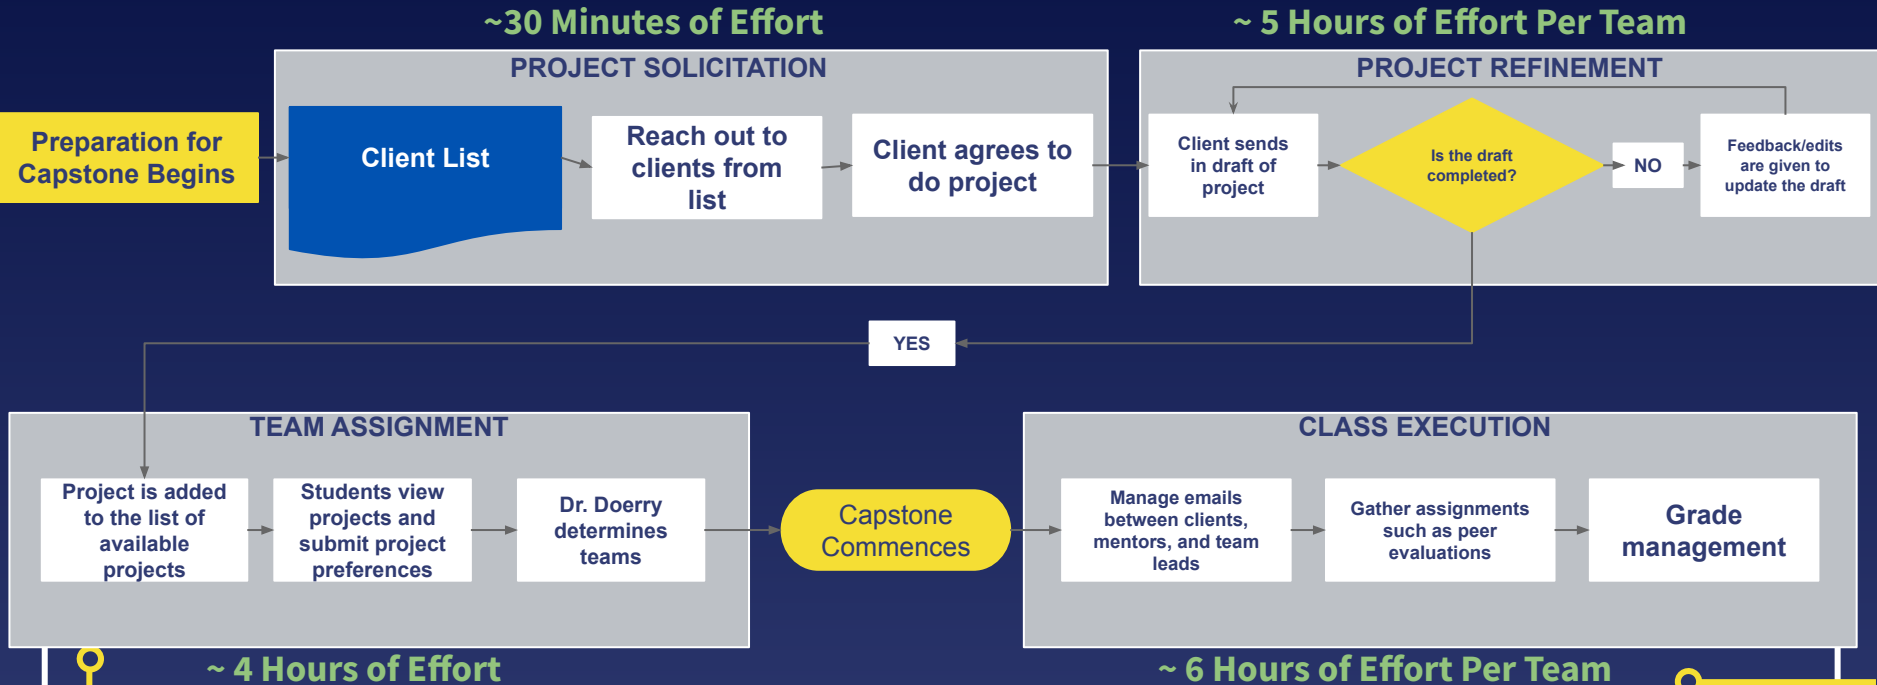

Solution Overview

Solution - Develop a web application that allows a user to:

- Store information from emails associated with TeamBandit
- Have a digital list of clients to email in one place
- Students can fill out specific deliverables to store information automatically
- Tool for manually/algorithmically sorting students into teams

Improved Workflow

Based on 2021-2022 Capstone. Total Hours of Effort: 269 Hours of Effort Per Capstone. ~132 Hours of Effort Saved

Domain Requirements

The key requirements that this web application should fulfill:

- Allow course organizer to create an account to save their information
- Assist our client's task of keeping track of a mass amount of emails from many clients
- Provide tools for a course organizer to add a course and manage inner course modules as well as manage students and mentors from within a course
- Enable organizers to assign students to projects through a built-in Team Assignments
- Automatically generate team websites, containing details about a pre-existing project

Architectural Overview

WEB HOSTING

Chosen Solution:  aws

- Cheap
- Reliable
- Popular
- Easy to Use

FRONT END

Chosen Solution:  React

- JavaScript Library
- Modern/Maintained

BACK END

Chosen Solution:  express  node JS

- Runtime Environment for JS
- Web Framework for Node

DATABASE MANAGEMENT SYSTEM

Chosen Solution:  PostgreSQL

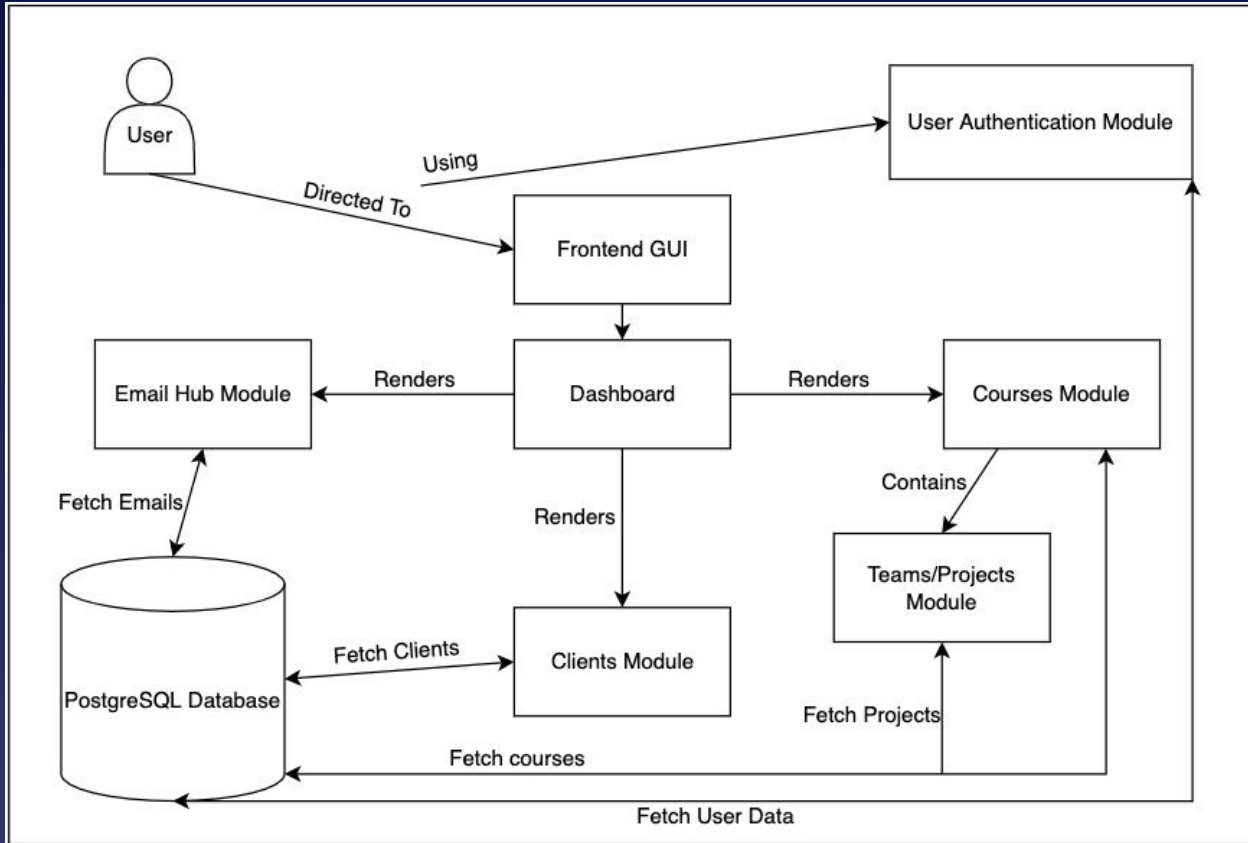

- Store large and sophisticated data
- Most powerful open source RDBMS

SUPPORTING FRAMEWORKS

Chosen Solutions:    

- Authentication
- Security
- Routing
- Styling

Implementation Details

General Flow:

- User performs an action
- Action data is sent from React to Express route through HTTP request
- Express route executes queries on PostgreSQL

Organizer Adds a Course:

- Organizer selects to add course and fills out required fields
- Form data is sent to an Express route where data is inserted into the database
- New data is dynamically displayed to the organizer

CSV Uploader

The screenshot displays a web application interface for managing clients. A modal window is open, providing a file upload option. The modal contains the following elements:

- A box with the text "DRAG AND DROP FILE HERE".
- The word "OR" centered below the box.
- A purple button labeled "UPLOAD .CSV FILE".
- A table with the following data:

First Name	Last Name	Email	Organization	Phone Number	Location	Notes
Tony	Stark	tonys@avengers.com	The Avengers	111-111-1111	He is Iron Man	
Tyler	Durdan	tylerd@paperstreetco.com	Paper Street Company	222-222-222	Fight Club	

Below the table are two buttons: "CANCEL" and "COMMIT CHANGES".

The background interface shows a "Clients" management page with a table containing columns for "Last name" and "First name". The page also includes a navigation menu, a header with "TeamBandit" and various statistics, and a footer with "Copyright @ 2022 All Rights Reserved".

Hello Mr. Quinn, I am mulling over an idea for a capstone project, but was unsure if it works in the context of your Capstone Program. Please let me know if you'd like to see it! Regards, -Quinn Melssen

Hello, I am sure it will be great, our capstone program can be very flexible with the software we design! Shoot over a PDF of what you have now and we can work on it from there! Regards, Mr. Quinn

Ok, here is my proposition! Tell me what you think!

Adding a New Project

The screenshot shows a web application interface for managing projects. At the top, there is a navigation bar with a 'GO BACK' button and a title 'CS 470 - Artificial Intelligence'. Below this, a 'Projects' section contains a table with columns for 'Project Title', 'Project Sponsor', 'Student Team', 'Team Mentor', and 'Edit'. A modal window titled 'Add Project' is open in the center, containing a form with the following fields:

- Project Name:** A text input field with the placeholder text 'Project Name'.
- Team Mentor:** A dropdown menu with the placeholder text 'Team Mentor'.
- Project Sponsor:** A dropdown menu with the placeholder text 'Project Sponsor'.

At the bottom of the modal, there are two buttons: a green '+ ADD' button and a red 'X CLOSE' button. A note above the form states: '* YOU CAN LEAVE MENTOR, AND SPONSOR SLOT BLANK.' The background table is dimmed, and a footer at the bottom right indicates 'Rows per page: 100' and '0-0 of 0'.

Team Lead Assignment

The screenshot shows a web application interface for managing projects. The main header is dark blue with a navigation menu containing 'GO BACK', 'CS 315 - Automata Theory', 'PROJECTS', 'SCHEDULE', 'STUDENTS', 'ASSIGNMENTS', 'MENTORS', and 'SETTINGS'. The 'PROJECTS' tab is active.

The main content area displays a table of projects. The first row is highlighted, showing 'The Avengers Initiative' project. The table has columns for 'Project Title', 'Project Sponsor', 'Team Mentor', and 'Edit'. The 'Edit' column contains an 'EDIT' button for each row.

An 'Edit Project' modal is open, centered over the first row. The modal contains the following fields:

- Project Name:** A text input field containing 'The Avengers Initiative'.
- Team Mentor:** A dropdown menu with 'Team Mentor' selected.
- Project Sponsor:** A dropdown menu with 'Project Sponsor' selected.
- Team Lead:** A dropdown menu with 'Team Lead' selected. The dropdown is open, showing a list of options: 'Team Lead', 'Steve Irving', 'Quinn Melssen', and 'Chris Evens'.

At the bottom right of the page, there is a pagination control showing 'Rows per page: 100' and '1-7 of 7'.

Meet the Team

Quinn Melssen
Programmer

Chris Evens
Team Lead

Steve Irving
Architect

Challenges and Resolutions

- Course data conflicts due to separate organizer and student view directories
 - Revise organizational structure to have one course view, adjust content based on user role
- Several Specific Database Conflicts
 - Manually adjust each mode of manipulating data (forms, tables) to enforce constraints in accordance with database table dependencies

Testing Plan

Unit Testing

- Testing individual components of application
- Application does not take actions on its own- emphasis on components directly interacted with by users

Units of Interest

- 1) Authentication - Account registration, login
- 2) Data Manipulation - Adding clients, assembling teams
- 3) Unique user features - Team lead actions

Testing Plan

Integration Testing

- Look for defects in interactions between modules:

1) Authentication Module - JWT Tokens

- Each possible action that results in populating data to check for proper identification of user role (Organizer or Student)

2) All Application Modules - React

- React Testing Library to verify proper loading of each application module
- Each DOM element (divs, body tags, etc.)
- Library's render function individually targets component/HTML Tags and ensures inner elements are mounted to make up the complete expected result to be displayed.

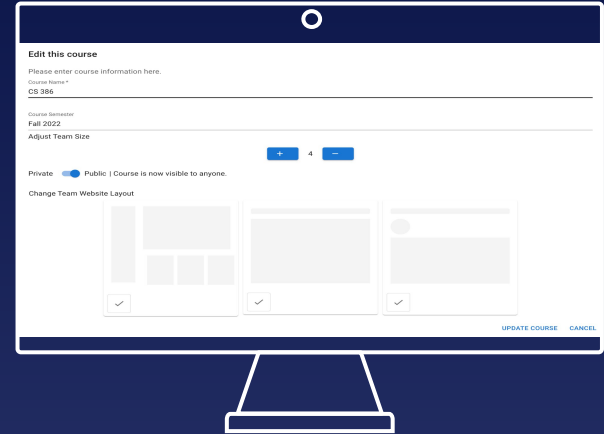

Testing Plan

Usability Testing

- Evaluate application's design as it pertains to the end user

Procedure

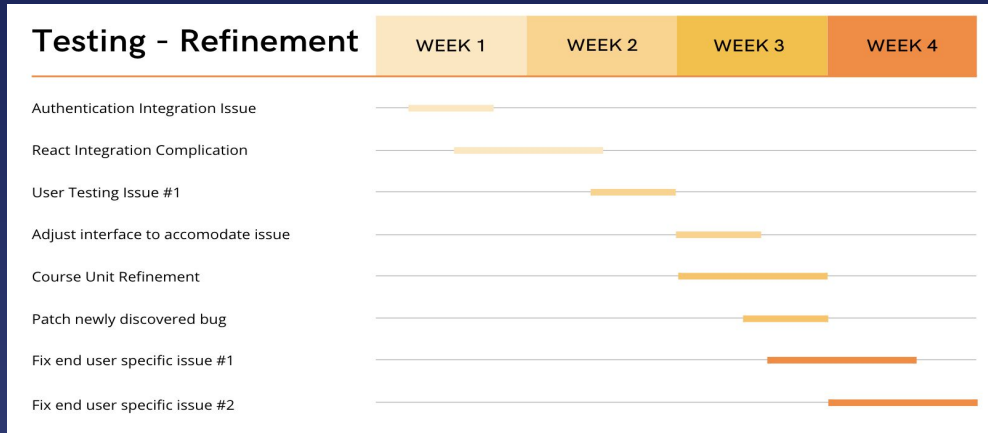

- 1) Gather a sample of test users consisting of
 - a) Course Organizers/Instructors
 - b) Students
- 2) Test users will perform test use cases with no prior experience
- 3) Participants will “think aloud” as they navigate the application

Testing Plan

Refinement Strategy

- Assess each issue as they are discovered
- Identify repeated areas of concern in User Testing
- Assemble schedule for refinement based on results of testing

Schedule

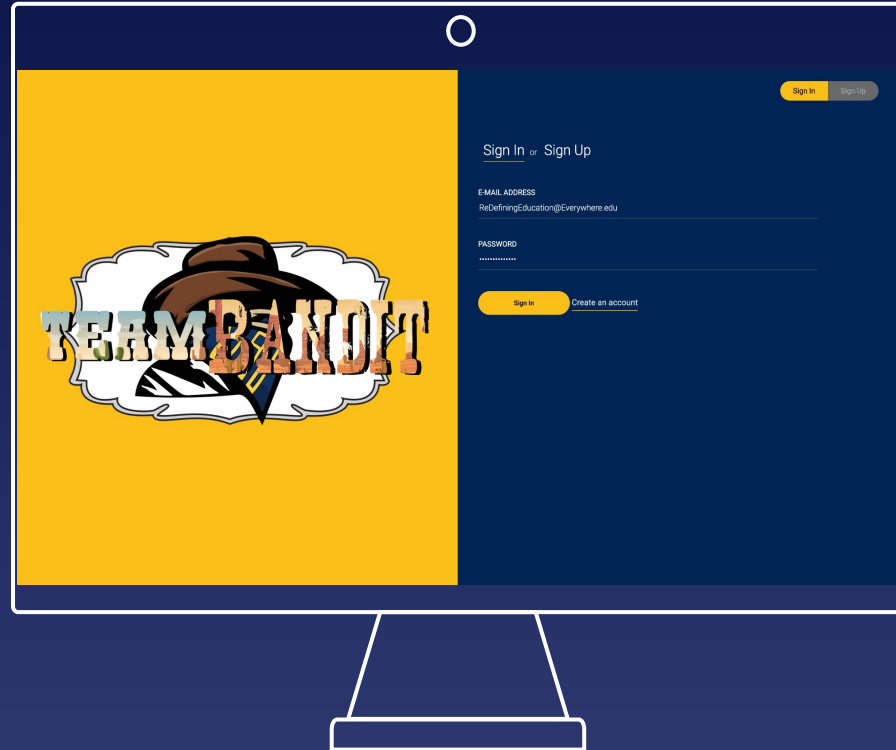

Team Bandit Development Plan

In Conclusion...

- Team-based courses are a massive undertaking. The objective is to build an app to make organizing these courses simple and faster
- This review - overview of solution architecture, implementation, testing plan, and schedule for final sprint
- Our client is very pleased with the prototype
- Using TeamBandit, it is now easy for any educator to teach students in the way which reflects every industry:

In Teams.
