### Client, Staff, and Mentor

Old Client <u>Rajpal Singh</u> Ex-WD R&D/ Technologist

New Client

Igor Steinmacher

NAU Associate Professor + Capstone Professor

#### Mentor

Saisri Muttineni

NAU Computer Science Graduate Student

### Introduction to Sector:

- Various companies: Adata, Western Digital, Samsung, Crucial, ...
- Market value in the tens of billions annually, with continuous growth.
- Diverse user base from individuals to large corporations and governments.
- Handles exabytes to zettabytes of data, constantly expanding with digital content growth.

### **Industry Products:**

- Hardware: SSDs, HDDs, etc...
- Software: Cloud Storage Services
- Different solutions for different needs

# SAMSUNG

### Individually Collect

Manually Analyze

### **Issues at Hand:**

- Silent Error/Failure Detection at Kernel Level
- Limited long-term performance monitoring
- Everyone needs to be an expert

### Workflow Inefficiencies:

- Manual Testing Process
- No Data Analysis Automation
- Individual Device Testing

Store Analysis

### The Problem

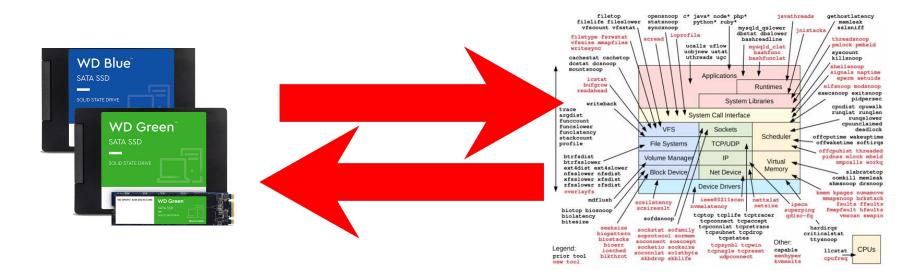

# Silent Errors

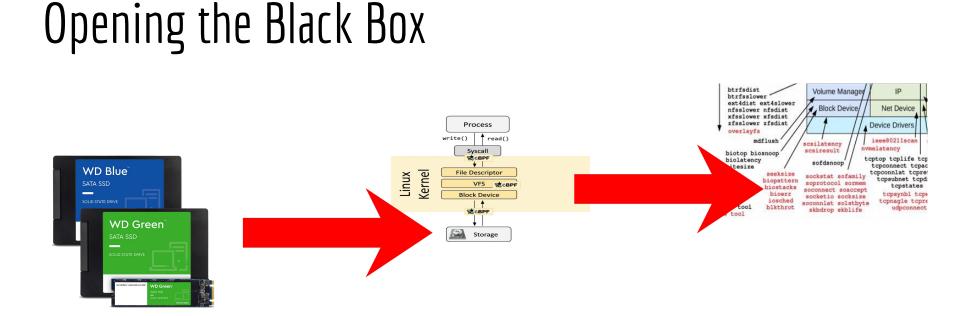

Performance Metrics:

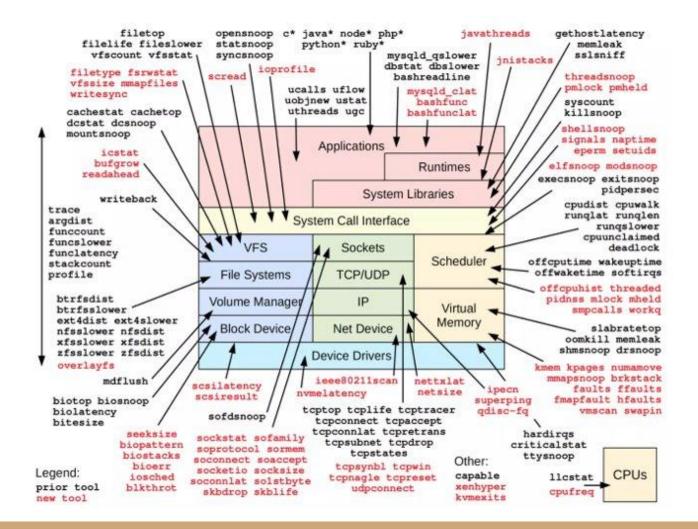

- Biolatency
- Biopattern
- Block RQ Complete
- Bioerror
- Block RQ Error

# The Black Box

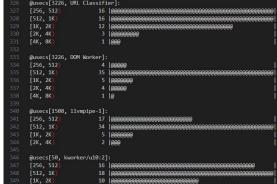

# Solution Overview

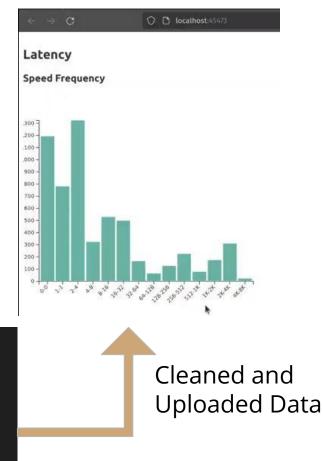

Comprehensive Data Analytics Dashboard:

- Takes user inputs on what to scan, how long, logging, etc.
- Automates data collection and data storage
- Handles data analysis to be displayed on visual dashboard

Raw Data

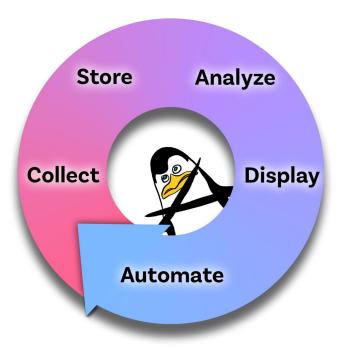

# **Requirements Review**

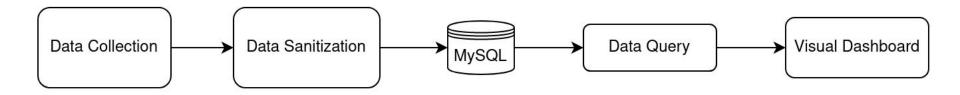

• Show kernel level operations to the end user through a visual dashboard.

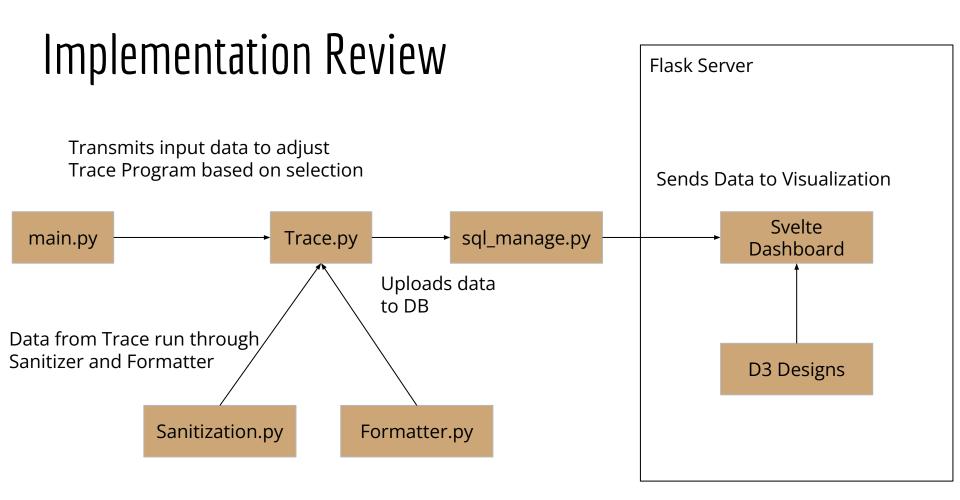

• Store all previous kernel data for future analysis.

• Automate kernel level data collection.

### Architecture Review

# Prototype Review

### Initialization of Services

Starting Flask Server and Svelte App

> svelte-app@1.0.0 dev
> rollup -c -w

#### LiveReload enabled

> svelte-app@1.0.0 start
> sirv public --no-clear --dev

Your application is ready~! 🚀

- Local: http://localhost:8080

Svelte app running at: http://localhost:8080

Flask server ready at <a href="http://127.0.0.1:5000/">http://127.0.0.1:5000/</a>

Flask Server and Svelte App successfully started!

### **User Input Collection**

#### **Configuration Input**

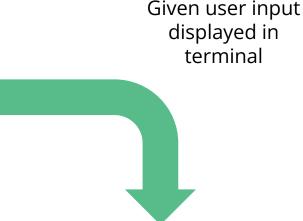

Process Time (in seconds): ((This time will determine how long each test runs))

Operations (comma-space separated): ((Allowed operations: block, bio, device\_drivers))

((Check this option to log terminal output into a log file)) – Log

> ((Check this option to merge all output csv files into one)) \_\_\_\_ Merge Output

> > Submit Upload JSON

#### Now collecting user inputs

-----USER INPUTS------

Process Time: 15, Operations: ['block', 'bio'], Verbose: True, Log: False, Ops: False, Merge: False

#### User Inputs Collected

### Master Data Collection

#### Beginning master data collection

NAME SIZE MODEL 15.3G zram0 953.9G PC SN740 NVMe WD 1TB nvme0n1 -nvme0n1p1 1022M -nvme0n1p2 4G -nvme0n1p3 944.9G 944.9G └─cryptdata Ldata-root 944.8G Lnvme0n1p4 4G └─cryptswap 4G

Select block device to fetch data of: nvmeOn1

Block Device Data Found: Model Number: PC SN740 NVMe WD 1TB Serial Number: 231708805892

Data inserted successfully! Master data collection complete Block Devices connected to PC

### Transactional Data Collection

#### Starting Trace

Recording results of: ../bt\_files/block\_rq\_complete.bt to ../output/block\_rq\_complete\_run.csv Finished running: ../bt\_files/block\_rq\_complete.bt after desired: 10

Recording results of: ../bt\_files/block\_rq\_error.bt to ../output/block\_rq\_error\_run.csv Finished running: ../bt\_files/block\_rq\_error.bt after desired: 10

Recording results of: ../bt\_files/biolatency.bt to ../output/biolatency\_run.txt Completed running: ../bt\_files/biolatency.bt after the desired: 10

Recording results of: ../bt\_files/bioerr.bt to ../output/bioerr\_run.txt Completed running: ../bt\_files/bioerr.bt after the desired: 10

Recording results of: ../bt\_files/biopattern.bt to ../output/biopattern\_run.txt Completed running: ../bt\_files/biopattern.bt after the desired: 10

Locating all output files in output directory

Finished Trace

### Data Sanitization/Formatting

#### Begun Sanitizing Files

Sanatizing File: biopattern\_run.txt Attempting to remove past file version Successfully removed the past file version DONE Sanatizing File: biopattern\_run.txt

Client Interest for Silent Failure?

Need more collections to understand

# Challenges/Resolution

### Challenges

- NVME Latency Unable to work on system
- Visualization Low documentation and compatibility for previous dashboard (Open search and Prometheus)

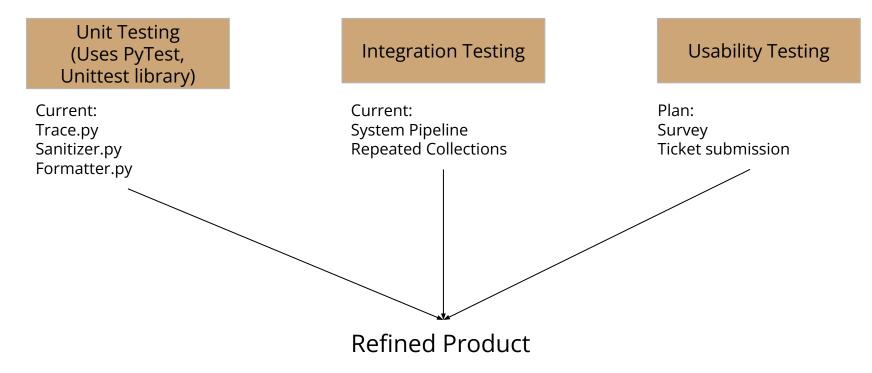

### Resolution

- NVME Latency Most recent Ubuntu version removed tracepoints entirely. Use current NVME Latency file on deprecated Version of Ubuntu with tracepoints existing
- Visualization Research completed and will remain on flask, svelte and D3

### Schedule

	Assigned	JANUARY 2024					FEBRUARY 2024						MARCH 2024							APRIL 2024

### Future Work

- Dockerize the program
- Implement cloud storage to gather information from multiple sources
- Create a prediction program to predict silent failures ahead of time

### Conclusion

#### **Problem:**

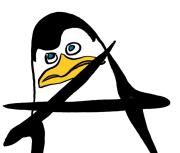

- Silent Failures, bad for companies who rely on SSD's in their infrastructure.
- For SSD Manufacturers:
  - Long data collection process.
  - Money Loss due to time usage and manual actions.

### Solution:

- Make R&D Process more efficient.
- System observability, insights, and analytics platform.

**Value:** Reduced expenses in man hours and avoiding recalls/refunds from broken devices

**Outcomes:** Old and new client were happy with the product

### THANK YOU

Old Client <u>Rajpal Singh</u> New Client
