Abdulrahman Aziz - [aaa797@nau.edu](mailto:aaa797@nau.edu)

The Heart Bytes team is working with a mechanical engineering team to produce a stent crimping machine for W.L. Gore & Associates. The Heart Bytes team is responsible for developing and testing all of the electrical components of the stent crimper.

1. General Requirements
  - 1.1. The device must use an iris crusher mechanism
  - 1.2. The device must have a graphical user interface to display information
  - 1.3. The device will draw power from the wall for general usage
    - 1.3.1. The device will also be able to accept power from a battery
  - 1.4. Safety Standards Requirements
    - 1.4.1. Warning labels in accordance with OSHA 1915.16
    - 1.4.2. Electric shock warning in accordance with OSHA 1910.137
    - 1.4.3. Emergency stop button in accordance with ISO 13850:2016
    - 1.4.4. Pinch point guard in accordance with OSHA 1910.212
2. Microcontroller Requirements
  - 2.1. Must have a minimum of 5 input pins that can be used for user inputs
    - 2.1.1. 2 input pins are required to adjust the diameter
    - 2.1.2. 2 input pins are required to adjust the radial force
    - 2.1.3. 1 input pin is required for the emergency stop button
  - 2.2. Must have a minimum of 4 input pins that can be used for sensors
    - 2.2.1. 2 pins are required for a distance sensor to tell the diameter
    - 2.2.2. 2 pins are required for a radial force sensor
  - 2.3. Must be able to drive at least 2 different motors
    - 2.3.1. 1 connection is required for use of a servo motor
    - 2.3.2. 4 connection required for use of a stepper motor
  - 2.4. Must be able to run a graphical user interface
    - 2.4.1. A set of seven-segment displays to display the diameter
    - 2.4.2. A set of seven-segment displays to display radial force
  - 2.5. Must have memory to store project files
  - 2.6. Must be able to supply the power needed to run all of the above components
3. User Input Requirements
  - 3.1. There must be two buttons to control the diameter of the stent
    - 3.1.1. One button should be used to increase the diameter
    - 3.1.2. One button should be used to decrease the diameter
  - 3.2. There must be two buttons to control the radial force of the stent
    - 3.2.1. One button should be used to increase the radial force
    - 3.2.2. One button should be used to decrease the radial force

- 3.3. There must be an additional button for emergency stops
4. Sensor Requirements
  - 4.1. Length Sensor
    - 4.1.1. Must be able to measure distances between 1 to 100 mm
    - 4.1.2. Must be accurate up to 1%
  - 4.2. Radial Force Sensor
    - 4.2.1. Must be able to read forces around 132.94 Newtons or 28.9 N/cm
    - 4.2.2. Must be accurate up to 1%
5. Graphical User Interface Requirements
  - 5.1. The GUI must be several seven-segment displays, one to display radial force, one for diameter
    - 5.1.1. One set of seven-segment displays should be able to display radial force
    - 5.1.2. One set of seven-segment displays should be able to display diameter
6. Motor Requirements
  - 6.1. Servo Motor
    - 6.1.1. It will be used in helping insert stents into the machine
  - 6.2. Stepper Motor
    - 6.2.1. It will be used to change the diameter of the iris crusher
