Discussion

We were discussing our final design which was between two ideas, one of them was the track and the other one was about the platform wall. We agreed that we selected the final design will be the wall that have features and textures all around and it has a wheel on it so it will be portable and we can move it in and out, also we will provide a platform all around the wall kind of safety and keep the kids away to be injured and also we are planning to make the platform folded once the kids done with the apparatus. The thing that we concerned about is the material that will be working with for our design because according to the client we need to consider the weather condition because it's snowing in flagstaff and also we will get an appointment this week with the client to discuss with them the final design that we selected and what is the thing that we need to provide in our design or what is the factor of safety of our design also the kind of material on the design.
