

NAU Energy Efficiency

ME476C-001

Project 8

April, 19 2018

Team members:

1-Salem Alharban

2-Faiez Alazmi

3-Abdullah Ben Gheyam

4-Ahmad Mnaei

5- Abdulrahman Alazemi

Project Description

The project consists of redesigning the control logic of Student Academic Services building to make it more energy efficient through modifying the HVAC

CLIENTS

- Project Sponsor: Dr. Jennifer Wade
- Faculty Advisor: Dr. Brent Nelson
Jon Heitzinger
- Instructor: Dr. Sarah Oman

CAD "eQUEST"

CAD "eQUEST"

Air-Side HVAC System | Spreadsheet | Summary

Pkgt Single Zone

Diagram illustrating the HVAC system components and airflow paths. Key components include: Air Cooled Condenser, Evap or Desic, Pre Heat, DX Cooling Coil, Furnace, Supply Fan, Return, Heat Recov, Outside Air Economizer, Return Fan, Humid istat., Nat Vent, System Meters, System Refrig, and System Baseboards. The flow starts from the Return, goes through the Return Fan, then through the Humid istat., Nat Vent, System Refrig, System Baseboards, and System Meters. It then passes through the Outside Air Economizer, Heat Recov, and Outside Air Economizer. The air then goes through the Air Cooled Condenser, Evap or Desic, Pre Heat, DX Cooling Coil, Furnace, and Supply Fan. The Supply Fan then distributes air to Other Zones.

Zone Assignments

- EL1 South Perim Zn (G.S1)
- EL1 South Perim Pl Zn (G.S0)
- EL1 East Perim Zn (G.E2)
- EL1 East Perim Pl Zn (G.E7)
- EL1 North Perim Zn (G.N3)
- EL1 North Perim Pl Zn (G.NE)
- EL1 West Perim Zn (G.W4)
- EL1 West Perim Pl Zn (G.WS)
- EL1 Core Zn (G.C5)
- EL1 Core Pl Zn (G.C10)
- EL1 South Perim Zn (T.S11)
- EL1 South Perim Pl Zn (T.S0)

Zone Features

Zone Terminal, Exhst, Thermostat, Meters, Zone Baseboards

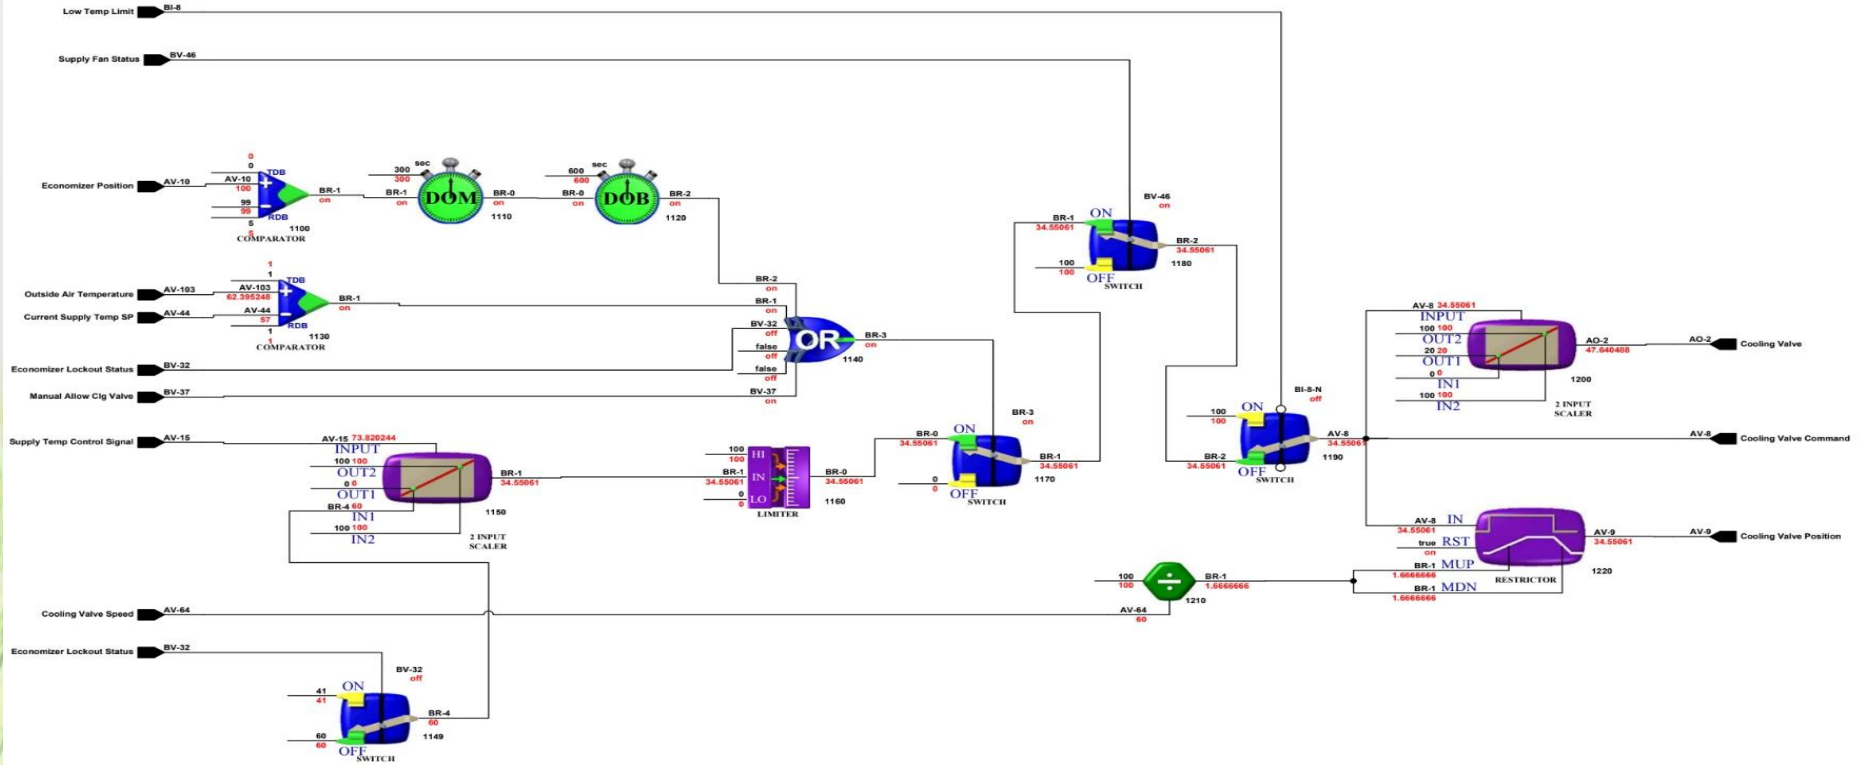

CAD "Alerton"

BOM

For this project the team does not have a bill of material since the logic is not be modified by any person but the vendor

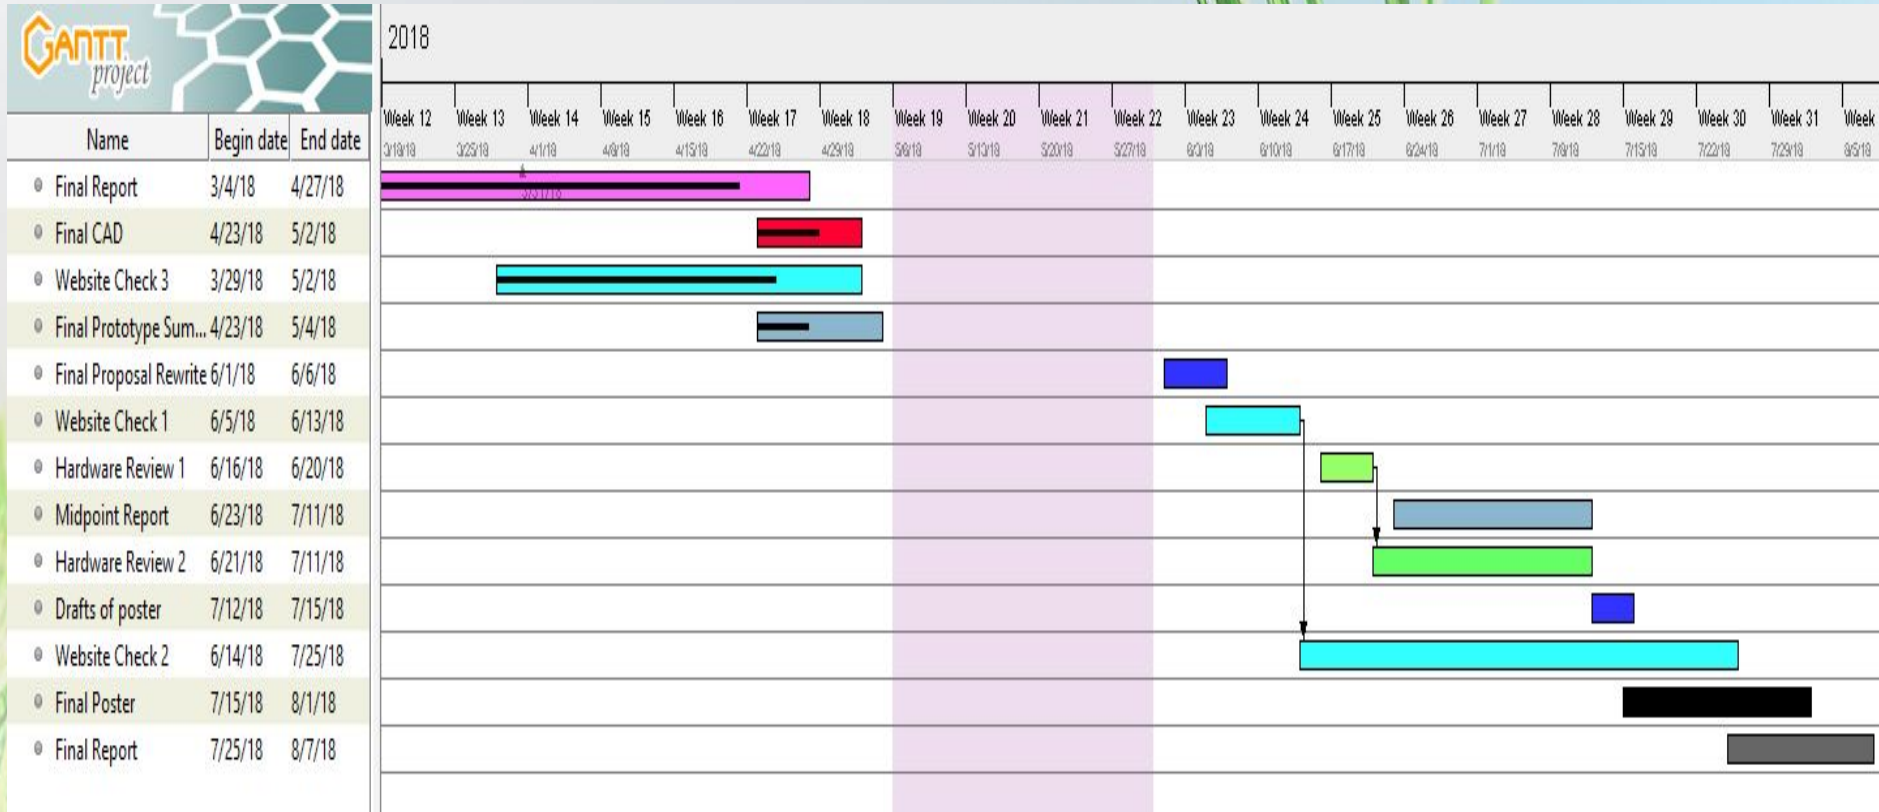

Subsystem

CUSTOMER REQUIREMENTS

Customer requirement	Description
Reliability	The design should be efficient in conserving energy.
Maintenance	The design should be easy to maintain.
Foolproof	The design should be able to resist failure.
Affordable	The materials used should be easily affordable.
Save energy	The design should have energy saving devices installed.
Payback in five years	The project should be economically viable such that the payback period should not exceed five years.
Save money	The entire project should be economically viable.
Pollution	The project should be environmentally friendly by ensuring that no pollutants are released to the environment.

Gantt Chart

Scope of work

- **eQuest :**
 - Faiez , Abdulrahman and Abdullah
- **Alerton:**
 - Salem and Ahmad
- **Logic:**
 - All team members
- **Analysing:**
 - All team members

Budget

- **Cost Max: \$500,000.00**
- **Actual expenses: \$0**
- **Anticipated expenses:
Through vendor quotation**
