

THE VALUE OF PERFORMANCE.
NORTHROP GRUMMAN

Standoff Project

Team:

Tyler Hans

Elaine Reyes

Brandon Bass

Sage Lawrence

Dakota Saska

Sept. 18, 2019

- Many standoffs are bonded to motor domes using adhesive
- Adhesive is applied and bracket is taped to help cure adhesive
- Taping is unreliable and costs money and man hours when it fails
- Analyze and build a prototype that will hold standoff brackets while adhesive cures

- The mounting arm shall:
 - a. Support brackets bonded 4-36 inches inboard from the motor ring
 - b. Have 6 degrees of freedom
 - c. Be mountable to several rocket motors
 - i. Orion 38
 - ii. Orion 50XL
 - iii. Castor 30XL
 - d. Be ESD (electrostatic discharge) compliant

Figure 1: Castor 50XL [1]

Project Description (3)

- d. Be adaptable to several mounting bracket templates
- e. Hold a bracket to up to 10 lbs
- f. Lock in place and apply a force of 20 lbs
- g. Have a Factor of Safety of 3.0 based on maximum expected loads
- h. Be easily manipulated by hand
- i. Perform a pull test of 50 lbs at 45 degrees of freedom

Figure 2: Castor 30XL [1]

Current “state-of-the-art” process:

Tape is used to hold the bracket, to the motor dome, in place while the adhesive cures.

Issues:

- ~5% failure rate
- Weather constraints
- Costly

Background & Benchmarking (3)

Benchmark (1): 6 DOF Robot Arm [2]

Features:

- 6 degrees of freedom
- maneuverability

Figure 3: 6 DOF Robot Arm [2]

Background & Benchmarking (3)

Benchmark (2): Kant Twist Stainless Steel Clamp [3]

Features:

- load capacity: 1500lb
- item depth: 2-¼ inches
- adjusts to the curve of the ring

Figure 4: Kant Twist Stainless Steel Clamp [3]

Benchmark (3): Dual Arm [4]

Features:

- dexterity
- use of joints
- maneuverability
- use of two arms
- lifts over 110lb

Figure 5: Dual Arm [4]

- The sources that we collected are intended to provide insight and possible solutions into the problems we are tasked with for the project.
- The subject matter relevant to the problems proposed in the project included:
 - Electrostatic Discharge Protection [5]
 - Rocket Structure and Functionality [1,6]
 - Human Driven 6-DOF Articulated Arm [7,8]
 - Pull Test Procedure and Setup [9]
- The references were gathered to help the individual team members in their specialized tasks but can also be used by the team as a whole.

Figure 6: Six-Axis Articulated Arm [7]

Customer and Engineering Requirements: Customer Needs

1. ESD compliance
2. Apply axial forces
3. Six degrees of freedom in movement
4. Usable 4" - 36" inboard of ring
5. Transportability
6. Ease of operation
7. Durability
8. Reliability
9. Adjustable Interfaces
10. Support 10lbs in locked position
11. Minimum 3.0 Factor of Safety

Figure 7: Castor 38 [1]

Customer and Engineering Requirements: Engineering Requirements

- Electrically Conductive (Y or N)
- Mass (slugs)
- Principal Dimensions (in)
- Working Length (in)
- Working Angle (Degrees)
- Modulus of Elasticity (lbf/in²)

Table 1: QFD

| Customer Need | Weight | Engineering Requirement | Electrically Conductive (Y or N) | Mass (slugs) | Principal Dimensions (in) | Working Length (in) | Working Angle (Degrees) | Modulus of Elasticity (lbf/in ²) |
|--------------------------------------------|--------|-------------------------|----------------------------------|--------------|---------------------------|---------------------|-------------------------|----------------------------------------------|
| 1. ESD compliance | 0.10 | | 9 | 0 | 0 | 0 | 0 | 0 |
| 2. Apply axial forces | 0.10 | | 0 | 1 | 0 | 3 | 3 | 9 |
| 3. Six degrees of freedom in movement | 0.10 | | 0 | 0 | 0 | 9 | 9 | 0 |
| 4. Usable 4" - 36" inboard of ring | 0.10 | | 0 | 1 | 9 | 9 | 3 | 1 |
| 5. Transportability | 0.07 | | 0 | 9 | 9 | 3 | 3 | 0 |
| 6. Ease of operation | 0.08 | | 3 | 9 | 3 | 9 | 9 | 0 |
| 7. Durability | 0.09 | | 0 | 3 | 0 | 0 | 0 | 9 |
| 8. Reliability | 0.09 | | 0 | 3 | 0 | 0 | 0 | 9 |
| 9. Adjustable Interfaces | 0.10 | | 0 | 3 | 0 | 3 | 3 | 0 |
| 10. Support 10lbs in locked position | 0.10 | | 0 | 3 | 0 | 3 | 3 | 9 |
| 11. Minimum 3.0 Factor of safety | 0.07 | | 0 | 3 | 0 | 0 | 0 | 9 |
| Absolute Technical Importance (ATI) | | | 1.14 | 2.9 | 1.77 | 3.63 | 3.03 | 4.15 |
| Relative Technical Importance (RTI) | | | 0.27 | 0.7 | 0.43 | 0.87 | 0.73 | 1 |

Schedule & Budget: Budget

Overall budget has been set at \$10,000 by Northrop Grumman

Expenses to date: \$0

Expected Expenses: ~\$8,000 with \$2,000 for contingency

Prototyping: ~\$1,000

Final Design: ~\$7,000

Schedule & Budget: Schedule for Capstone

Table 2: Gantt Chart

| TASK NAME | START DATE | END DATE | DURATION | RESPONSIBLE ENGINEER | PERCENT COMPLETE | 8/26 - 8/30 | | | | | 9/2 - 9/6 | | | | | 9/9 - 9/13 | | | | |
|----------------------------------|------------|----------|----------|----------------------|------------------|-------------|---|---|----|---|-----------|---|---|----|---|------------|---|---|----|---|
| | | | | | | M | T | W | Th | F | M | T | W | Th | F | M | T | W | Th | F |
| Original Design Project | | | | | | | | | | | | | | | | | | | | |

| Preliminary Design Review (PDR) | 9/16 | 12/11 | 63 | Client and Team | 0% | | | | | | | | | | | | | | | |
| Critical Design Review (CDR) | 9/16 | Feb/Mar | N/A | Client and Team | 0% | | | | | | | | | | | | | | | |

Schedule & Budget: Schedule for Northrop Grumman

System Requirements Review (SRR): Sept 16th - Completed

Preliminary Design Review (PDR): Finals Week Fall Semester

Critical Design Review (CDR): February/March

Northrop Symposium Day : Late April 2020

Northrop Mentor Meetings - Throughout both semesters
