

HR 2 BREAKDOWN

TEAM: NAU NASA Psyche Sampling Team - #B7

Due Date: **Friday, March 6, 2020 at 11:59pm**

Provide several pics of the current state of your completed system thus far here:

Figure 1: Full Mainframe & Base System with Drill Holder Plate and Torque Motor

Figure 2: Full Mainframe & Base System with Drill Holder Plate and Torque Motor (Front View)

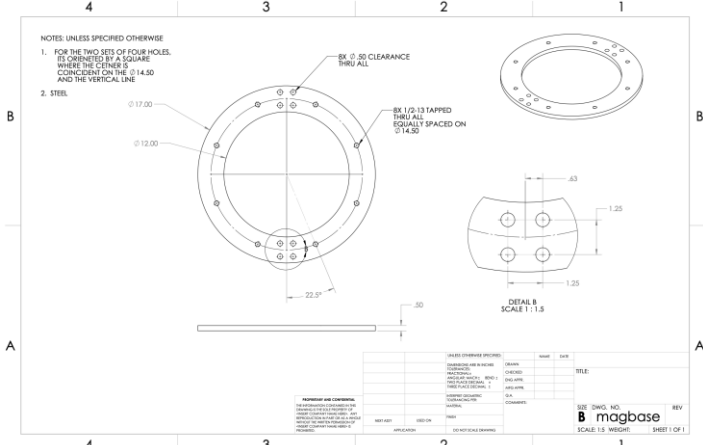

Figure 3: Full Current Electrical Arduino Setup with Relay, Motor Driver, Hall Effect Sensor, & Drill, Torque and Servo Motors (not plugged into power source on the top left)

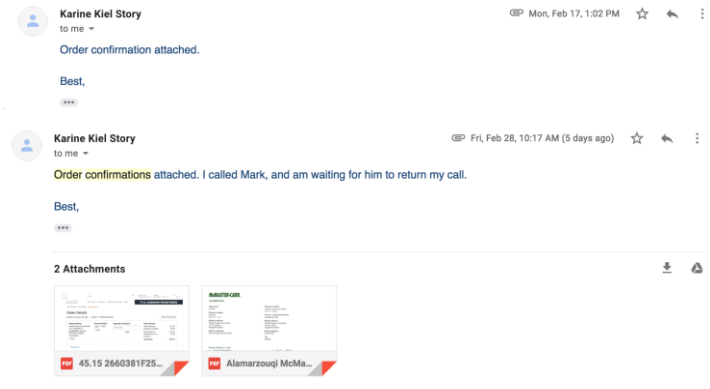

The following are the Action Items each person completed between Hardware Review 1 and Hardware Review 2:

Team Member: Andrew Acosta

Action Item	Date Completed	Result/Proof of Completion																																																																																	
Helped built the tower used to house the electrical components and drill	2/13/20																																																																																		
Completed the drawing for the magnetic base	2/18/20																																																																																		
Created an Excel File to figure out the best AWG to be used for the electromagnetic base	2/24/20	<table border="1"> <thead> <tr> <th>Gauge</th> <th>thickness</th> <th>bolt length</th> <th>max turns</th> <th>turns x14</th> <th>bolt circumference</th> <th>length (in)</th> <th>length (ft)</th> <th>for 14 bolts</th> </tr> </thead> <tbody> <tr> <td>30</td> <td>0.01</td> <td>3</td> <td>300</td> <td>4200</td> <td>1.570796327</td> <td>471.238898</td> <td>39.2699082</td> <td>549.778714</td> </tr> <tr> <td>26</td> <td>0.0159</td> <td>3</td> <td>188.679245</td> <td>2641.50943</td> <td>1.570796327</td> <td>296.376665</td> <td>24.6980555</td> <td>345.772776</td> </tr> <tr> <td>22</td> <td>0.0253</td> <td>3</td> <td>118.577075</td> <td>1660.07905</td> <td>1.570796327</td> <td>186.260434</td> <td>15.5217028</td> <td>217.30384</td> </tr> <tr style="background-color: yellow;"> <td>4</td> <td>0.2043</td> <td>3</td> <td>10</td> <td>140</td> <td>1.570796327</td> <td>15.7079633</td> <td>1.30899694</td> <td>18.3259571 yes</td> </tr> <tr> <td>8</td> <td>0.1285</td> <td>3</td> <td>23.3463035</td> <td>326.848249</td> <td>1.570796327</td> <td>36.6722878</td> <td>3.05602398</td> <td>42.7843357 no</td> </tr> <tr> <td>2</td> <td>0.2576</td> <td>3</td> <td>11.6459627</td> <td>163.043478</td> <td>1.570796327</td> <td>18.2934355</td> <td>1.52445296</td> <td>21.3423414 yes</td> </tr> <tr> <td>6</td> <td>0.162</td> <td>3</td> <td>18.5185185</td> <td>259.259259</td> <td>1.570796327</td> <td>29.0888209</td> <td>2.42406841</td> <td>33.9369577 almost</td> </tr> <tr> <td>10</td> <td>0.1019</td> <td>3</td> <td>29.4406281</td> <td>412.168793</td> <td>1.570796327</td> <td>46.2452304</td> <td>3.8537692</td> <td>53.9527688</td> </tr> </tbody> </table>	Gauge	thickness	bolt length	max turns	turns x14	bolt circumference	length (in)	length (ft)	for 14 bolts	30	0.01	3	300	4200	1.570796327	471.238898	39.2699082	549.778714	26	0.0159	3	188.679245	2641.50943	1.570796327	296.376665	24.6980555	345.772776	22	0.0253	3	118.577075	1660.07905	1.570796327	186.260434	15.5217028	217.30384	4	0.2043	3	10	140	1.570796327	15.7079633	1.30899694	18.3259571 yes	8	0.1285	3	23.3463035	326.848249	1.570796327	36.6722878	3.05602398	42.7843357 no	2	0.2576	3	11.6459627	163.043478	1.570796327	18.2934355	1.52445296	21.3423414 yes	6	0.162	3	18.5185185	259.259259	1.570796327	29.0888209	2.42406841	33.9369577 almost	10	0.1019	3	29.4406281	412.168793	1.570796327	46.2452304	3.8537692	53.9527688

<p>Obtained the MagBase</p>	<p>2/28/20</p>	
<p>Combined the tower and the Magbase</p>	<p>3/5/20</p>	

Team Member: Sultan Almarzouqi

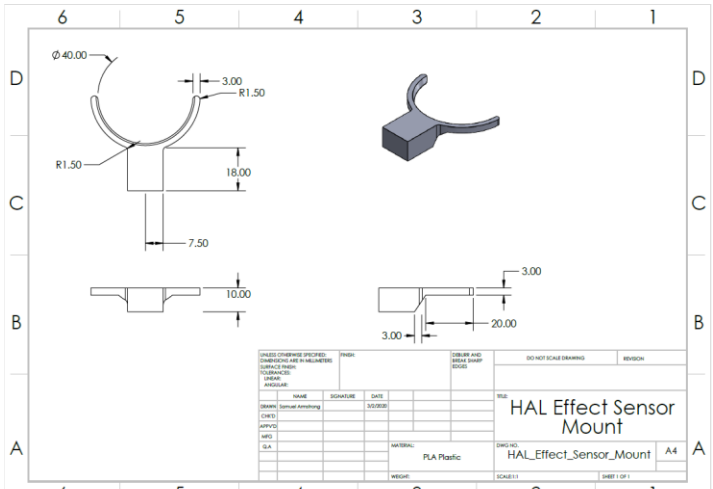

Action Item	Date Completed	Result/Proof of Completion
Ordering Parts - Taking all the parts needed to complete the project and ordering them online.	2/10/2020	 <p>The screenshot shows two email messages from Karine Kiel Story. The first message, dated Monday, Feb 17, 1:02 PM, contains the text: "Order confirmation attached. Best,". The second message, dated Friday, Feb 28, 10:17 AM (5 days ago), contains the text: "Order confirmations attached. I called Mark, and am waiting for him to return my call. Best,". Below the messages are two attachments: a PDF file named "45.15 2660381F25..." and a PDF file named "Almarzouqi McMa...".</p>
Building the tower - Building the the tower base that holds all the parts together.	2/13/2020	 <p>The photograph shows a rectangular metal frame structure, likely the tower base, constructed from perforated metal beams. The structure is placed on a light-colored wooden floor. In the background, a whiteboard with some handwritten notes and a dark door are visible.</p>

Attaching the drill plate to the tower base.

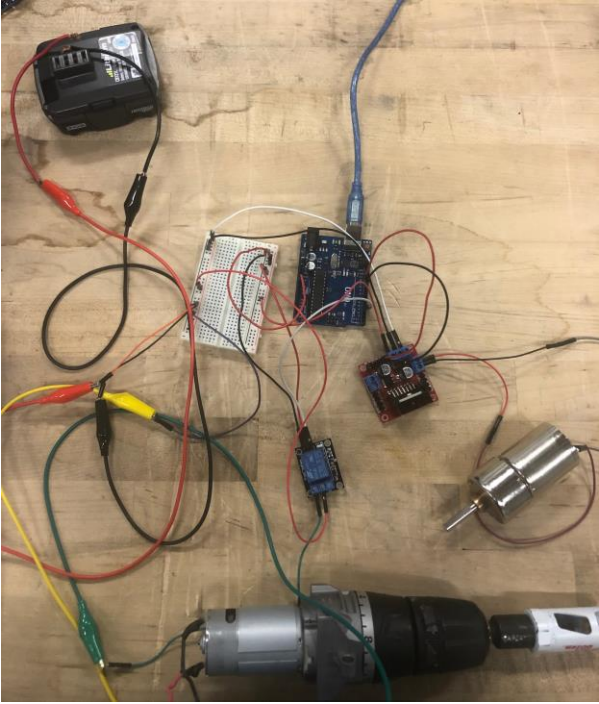

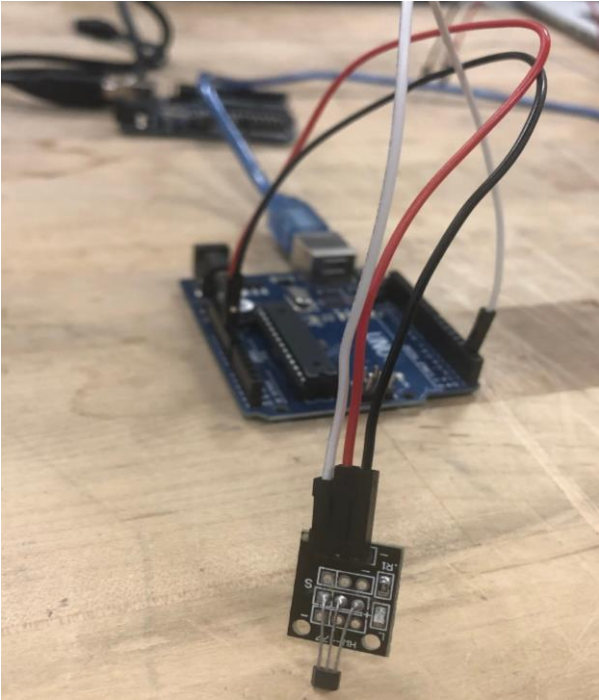

3/2/2020

Team Member: Sam Armstrong

Action Item	Date Completed	Result/Proof of Completion																																																
<p>Built the tower base assembly to house the drill assembly.</p>	<p>2/13/2020</p>																																																	
<p>Researched ball screw technology and put together order of necessary parts in excel to be ordered.</p>	<p>2/17/2020</p>	<table border="1"> <thead> <tr> <th colspan="6">Linear Actuator Parts Order</th> </tr> <tr> <th>Qty</th> <th>Item</th> <th>Details</th> <th>Source</th> <th>Price (\$)</th> <th>Part No.</th> </tr> </thead> <tbody> <tr> <td>3</td> <td>Easy-Access Base-Mounted Shaft Support</td> <td>for 3/8" Shaft Diameter, 6061 Aluminum</td> <td>https://www.mcmaster.com/catalog/226/2220</td> <td>40.14</td> <td>226242</td> </tr> <tr> <td>1</td> <td>External-Thread Ball Nut with 3/8"-8 Right-Hand Thread for Ball Screw</td> <td>4x8</td> <td>https://www.mcmaster.com/catalog/226/2240</td> <td>63.46</td> <td>2262412</td> </tr> <tr> <td>1</td> <td>Mounted Linear Sleeve Bearing</td> <td>Self Align, 0.0005" Shaft Clearance, 1.5/16" Overall Length</td> <td>https://www.mcmaster.com/catalog/226/2227</td> <td>53.33</td> <td>2262419</td> </tr> <tr> <td>1</td> <td>Ball Screw</td> <td>Right Hand, 3/8"-8 Thread Size, 1 Foot Long</td> <td>https://www.mcmaster.com/catalog/226/2245</td> <td>44.33</td> <td>2262403</td> </tr> <tr> <td>1</td> <td>Linear Motion Shaft</td> <td>1/80 Carbon Steel, 3/8" Diameter, 12" Long</td> <td>https://www.mcmaster.com/catalog/226/2236</td> <td>16.95</td> <td>2262114</td> </tr> <tr> <td></td> <td>Total</td> <td></td> <td></td> <td>218.17</td> <td></td> </tr> </tbody> </table>	Linear Actuator Parts Order						Qty	Item	Details	Source	Price (\$)	Part No.	3	Easy-Access Base-Mounted Shaft Support	for 3/8" Shaft Diameter, 6061 Aluminum	https://www.mcmaster.com/catalog/226/2220	40.14	226242	1	External-Thread Ball Nut with 3/8"-8 Right-Hand Thread for Ball Screw	4x8	https://www.mcmaster.com/catalog/226/2240	63.46	2262412	1	Mounted Linear Sleeve Bearing	Self Align, 0.0005" Shaft Clearance, 1.5/16" Overall Length	https://www.mcmaster.com/catalog/226/2227	53.33	2262419	1	Ball Screw	Right Hand, 3/8"-8 Thread Size, 1 Foot Long	https://www.mcmaster.com/catalog/226/2245	44.33	2262403	1	Linear Motion Shaft	1/80 Carbon Steel, 3/8" Diameter, 12" Long	https://www.mcmaster.com/catalog/226/2236	16.95	2262114		Total			218.17

<p>Modeled a 3d-printable mount to attach the HALL Effect sensor to the body of the drill.</p>	<p>3/2/2020</p>																																																	

Team Member: Karissa Barroso

Action Item	Date Completed	Result/Proof of Completion
Arduino Setup -Putting together an arduino setup with a torque motor using a motor driver and powering the drill motor using a relay switch.	2/14/2020	
Arduino Setup - Installing a hall effect sensor in the arduino set up.	2/21/2020	

Arduino Setup - Installing a servo motor into the Arduino set up.

2/26/2020

Arduino Setup - Developing a full circuit utilizing all key components to the Arduino control. (like using a breadboard to all operate under one arduino and one power source)

2/28/2020

Team Member: Scott Sprauer

Action Item	Date Completed	Result/Proof of Completion
-------------	----------------	----------------------------

<p>Arduino Coding - Learned the basics of coding and set up an arduino uno. This was done with a virtual tool and was helpful in learning the very basics.</p>	<p>1/23/20</p>	<pre> 2.3_code \$ int LED=13; int counter=0; void setup() { // put your setup code here, to run once: pinMode(LED,OUTPUT); Serial.begin(9600); } void loop() { // put your main code here, to run repeatedly: counter = counter +1; // adding one everytime time it loops Serial.print("Blink Number # "); Serial.println(counter); digitalWrite(LED,HIGH); delay(1000); digitalWrite(LED,LOW); delay(500); } </pre>
<p>Arduino Coding - Coding the arduino in such a way to power a torque motor and varying its speed throughout the code.</p>	<p>2/5/20</p>	<pre> Analog unsigned long currTime, prevTime; const unsigned long intv = 20; void setup() { Serial.begin(9600); pinMode(11, OUTPUT); pinMode(10, OUTPUT); pinMode(5, OUTPUT); pinMode(6, OUTPUT); prevTime = millis(); } void loop() { int valx, valy, speedx, speedy; currTime=millis(); valx = analogRead(A0); valy = analogRead(A1); if(currTime-prevTime > intv){ if(valx > 502 && valx < 522) { analogWrite(11,0);//Clockwise analogWrite(10,0); } else if(valx >= 522){ </pre>
<p>Arduino Coding - Collected relays and learned how to properly code the relay as to not burn up the motors, as well as learned how to develop a code to calculate rpm's with the hall effect sensor.</p>	<p>2/12/20</p>	<pre> Relay const int relay = 8; void setup() { pinMode(relay, OUTPUT); pinMode(10 , OUTPUT); pinMode(11, OUTPUT); } void loop() { analogWrite(10, 2500); analogWrite(11,0); digitalWrite(relay, 1); delay(8000); digitalWrite(relay,0); delay(3000); } </pre>

<p>Arduino Coding - Coding logical statements in attempt to create all full code for the different areas of the electrical system. Addition to servos.</p>	<p>2/26/20</p>	<pre> Sweep § #include <Servo.h> Servo myservo; // create servo object // twelve servo objects can be created int pos = 0; // variable to store th void setup() { myservo.attach(9); // attaches the s } void loop() { for (pos = 0; pos <= 180; pos += 1) { // in steps of 1 degree myservo.write(pos); // delay(15); // } for (pos = 180; pos >= 0; pos -= 1) { myservo.write(pos); // delay(15); // } } </pre>
<p>Arduino Coding - Attempt to start putting all codes together and create the full operational code.</p>	<p>3/4/20</p>	<pre> state = digitalRead(sensor); Serial.print(revsPerMin); Serial.print ("\t"); Serial.println(prevRPM); delay(500); if (fabs(revsPerMin-prevRPM)> 0.1) // if difference in r { currTimemillis = millis(); // tell me what time i prevRPM = revsPerMin; // set back to rpm if (initprevTimemillis == false) // dont do it the first { prevRPM = currTimemillis; initprevTimemillis = true; } } if (currTimemillis - prevTimemillis > 50) // if rpms have { digitalWrite(relay, 0); prevTimemillis = currTimemillis; // set back to n } else // Keep drill on { digitalWrite(relay,1); } </pre>

The following are the Action Items for each team member between HR 2 and the Final Product presentation:

Team Member	Action Items	Date Due
<p>Andrew Acosta</p>	<ol style="list-style-type: none"> 1. Finish electromagnet 2. Improve vertical system 3. Build caching system 	<ol style="list-style-type: none"> 1. 3/9/20 2. 3/15/20 3. 3/22/20
<p>Sultan Almarzouqi</p>	<ol style="list-style-type: none"> 1. Upper motor frame set up 2. Attaching the tower magnetic base 	<ol style="list-style-type: none"> 1. 3/9/2020 2. 3/12/2020

Sam Armstrong	<ol style="list-style-type: none"> 1. Print HALL Effect sensor mount 2. Design and print servo mount for core remover 3. Develop storage and caching system assembly 4. Connect motor to ball screw assembly 	<ol style="list-style-type: none"> 1. 3/13/2020 2. 3/20/2020 3. 3/22/2020 4. 3/9/2020
Karissa Barroso	<ol style="list-style-type: none"> 1. Develop a setup for distance motors in the current full setup and put together a servo motor in a way that it can work how the team needs for the caching system. 2. Simplify circuit by getting rid of breadboard and soldering wires together. 3. Combine Arduino Hardware with Mainframe Hardware. 	<ol style="list-style-type: none"> 1. 3/11/2020 2. 3/14/2020 3. 3/22/2020
Scott Sprauer	<ol style="list-style-type: none"> 1. Create code distance sensor and servos into a full system. 2. Get a full coding system up and running with the caching and magnet system inside. 3. Test program in full. 	<ol style="list-style-type: none"> 1. 3/11/20 2. 3/14/20 3. 3/22/20
