

NPOI Vacuum Manifold Capstone

# Team Meeting

---

22 September 2021 / 5:30 PM / Engineering Building 2<sup>nd</sup> floor East

## ATTENDEES

Wyatt (Note Taker) / Cydny / Alex

## AGENDA

1. Make sure everyone has what they need to move forward with their projects
2. Meet with Jim about CV.
3. Made a choice, front or back of the tanks.

## NOTES

- Everyone is on track and is not waiting on anyone else to get something done.
- The talk with Jim was long, over an hour. We showed some of the design ideas and he really liked all of them and had good things to say about each design. He seemed happy that we were not only addressing the vacuum manifold but other problems with the system at the same time.
- After a lot of talking, drawing, and brainstorming we (the team and client) have decided that keeping the manifold in the front of the tanks will be the way forward.
- We scheduled NPOI shop time this Saturday at 4:00 pm.

## ACTION ITEMS

1. Prep for Saturday at NPOI shop

## NEXT WEEK'S AGENDA

- Continue good work
- Go to NPOI for shop time
- Find time to go and get engineering drawings and take measurements of the existing structure
- Perform sub-concept variation decision processes so we can start designing and ordering parts.
- Go team Go!!!
